SUMMARY

Developer Relations leader for small, embedded teams. At each company I look for the biggest gap between the product and the developers using it, then build what closes it: cfn-lint, a CloudFormation linter now downloaded 11M+ times a month; a partner integration portal; and, at Algolia, tooling and docs that work for agents as well as people. Then I work alongside the community, through live coding, hackathons and demos, to show it works.

CORE COMPETENCIES

AI Agents (MCP, Tool Use, Evals, multi-model; Algolia Agent Studio) · **Claude Code**
Developer Community · **Documentation** · **Technical Content** · **Public Speaking**
JavaScript/React · **Python** · **Go** · **AWS**

EXPERIENCE

Senior Manager, Developer Relations | Algolia | August 2025 to present

Lead Developer Advocate | Algolia | August 2021 to August 2025

- Lead the docs and developer advocacy teams (up to five direct reports) for Algolia's API-first search platform
- Led the documentation migration from a homegrown platform to Mintlify with zero downtime, then made the docs readable by agents with llms.txt and Algolia's library on Context7
- Wrote the engineering post mapping the rebuilt Algolia CLI's agent-ready features (schema introspection, structured output, dry-run, scoped auth) to agent-first design principles, a top-five Algolia engineering post for February to August 2026
- Built the **Agent Studio CLI**, a tool for creating, snapshotting, updating and publishing Algolia agents from version-controlled config, from idea to working tool in a week
- Built **TCG Search**, a reusable booth demo where a multi-modal agent answers from the same Algolia index as site search, showing why embedded agents need fast retrieval; deployed at eight conferences, including Microsoft Build, Gartner and Adobe Summit, each in a week or less, with 733 cards claimed
- Launched the Algolia Discord from 0 to 2,000+ developers in a year; host Algolia DevCon, the annual developer conference, for five years, plus quarterly livestreams of 200-500 attendees
- Run live coding sessions, hackathons (with dev.to, Code & Coffee and Hackernoon) and the Quick Start video embedded in the getting-started docs

Senior Engineer, Developer Relations and Integrations | Bold Penguin | March 2019 to August 2021

- Took partner documentation from nothing (a few snippets emailed to partners) to a published reference for the Exchange API, generated from an OpenAPI spec
- Built the code samples, integration guides and Developers Portal that let partners from single agencies to large enterprises integrate with less hand-holding, cutting the typical Exchange onboarding call from about 90 to 30 minutes
- Advocated for partner-requested API enhancements with product teams, improving usability

Senior Developer Advocate, AWS CloudFormation | Amazon Web Services | August 2017 to March 2019

- Reported to the service director and represented the developer community in service team planning, influencing the roadmap
- One of the two founding developers of [cfn-lint](#), the open source CloudFormation template linter (2,600+ GitHub stars, 11M+ monthly PyPI downloads today), including commissioning its logo and launch stickers
- Maintained CloudFormation's other open source repositories, published best-practices content on the AWS management tools blog (including a guide to pre-commit validation with cfn-lint), and engaged enterprise customers at meetups and conferences

Security Solution Architect | Amazon Web Services | April 2016 to August 2017

- Advised CISOs and security teams across North America on cloud security posture and PCI, HIPAA and SOC compliance, and created AWS security labs for bootcamps and summits

Senior Professional Services Consultant | Amazon Web Services | July 2013 to April 2016

- Migrated large enterprises to AWS through secure, repeatable CI/CD, including PCI-compliant infrastructure and IAM governance pipelines

SELECTED PROJECTS

- [Pokemon TCG Vending Machine Search](#): conference-booth demo of a multi-modal chat agent grounded in the same index that powers search, built with React/InstantSearch, Agent Studio with evals, a card scanner, and serverless APIs on Vercel and Supabase
- [Agent Studio CLI](#): command-line tool to create, snapshot, update and publish Agent Studio agents from version-controlled config, with --json output for scripts and agents
- [Video Transcription Search](#): full-stack demo of video content indexing with real-time search insights
- [Hello MCP](#): minimal MCP server over Streamable HTTP, with a companion tutorial

WRITING AND SPEAKING

Writing

- [We rewrote the Algolia CLI for AI agents](#)
- [Chat, meet the Searchbox](#)
- [Building a JavaScript “Hello, World” MCP server](#) (my best-performing dev.to post since 2022)
- [Git pre-commit validation of CloudFormation templates \(AWS\)](#). More at [dev.to/chuckm](#)

Speaking

- [DevRelCon 2026, Blog While the Context is Fresh](#)
- [Haystack US 2025, Agentic query understanding using search MCPs](#)
- [AWS re:Invent 2018, Deployment Scenarios with AWS CloudFormation](#) (11,000+ views)
- [Live coding: Adding search insights to InstantSearch applications](#) (2,000+ views)
- [The WebDev Challenge, Future of AI-native UX](#)

EDUCATION

Bachelor of Science, Mathematics and Computer Science (Cum Laude)

Bachelor of Arts, Literature and Writing (Cum Laude)

Northern Kentucky University | 1997
